

Creating a Zip2Go File

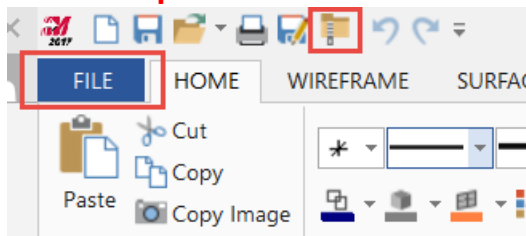

A Zip2Go file will package up your Part file as well as all the Post files that we need to test the NC output.

Instructions:

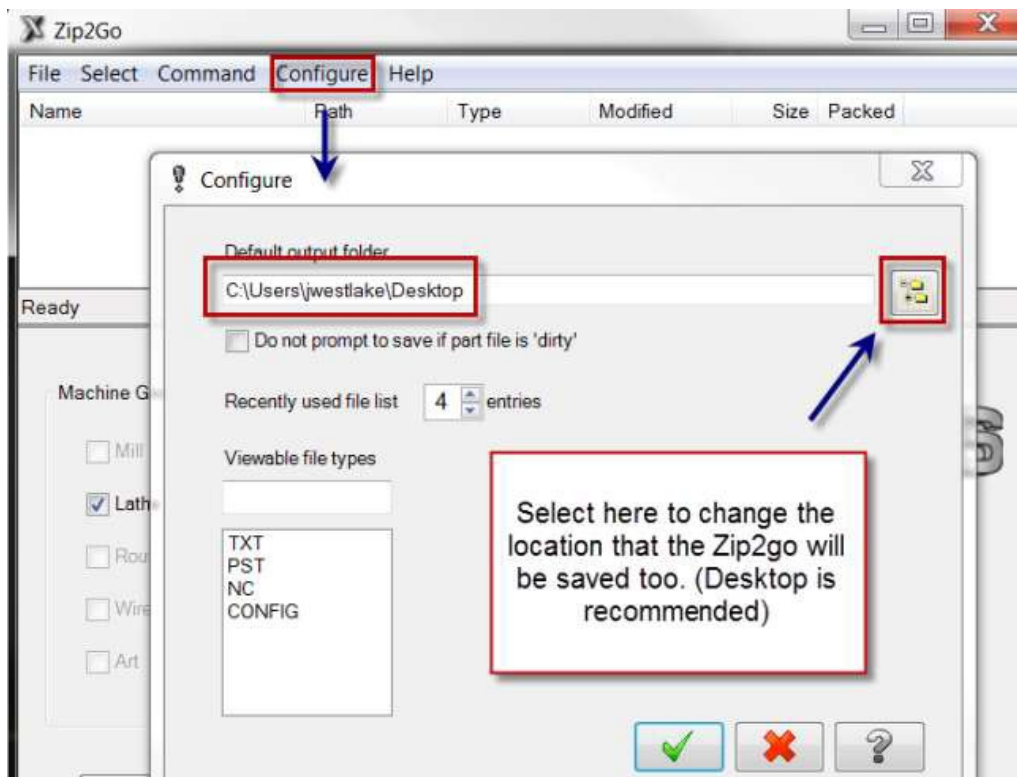

1. Save the file that you are working on. (This ensures that the part file will be included in the Zip2Go)
2. From the top menu in Mastercam select Help > then Zip2Go Utility.

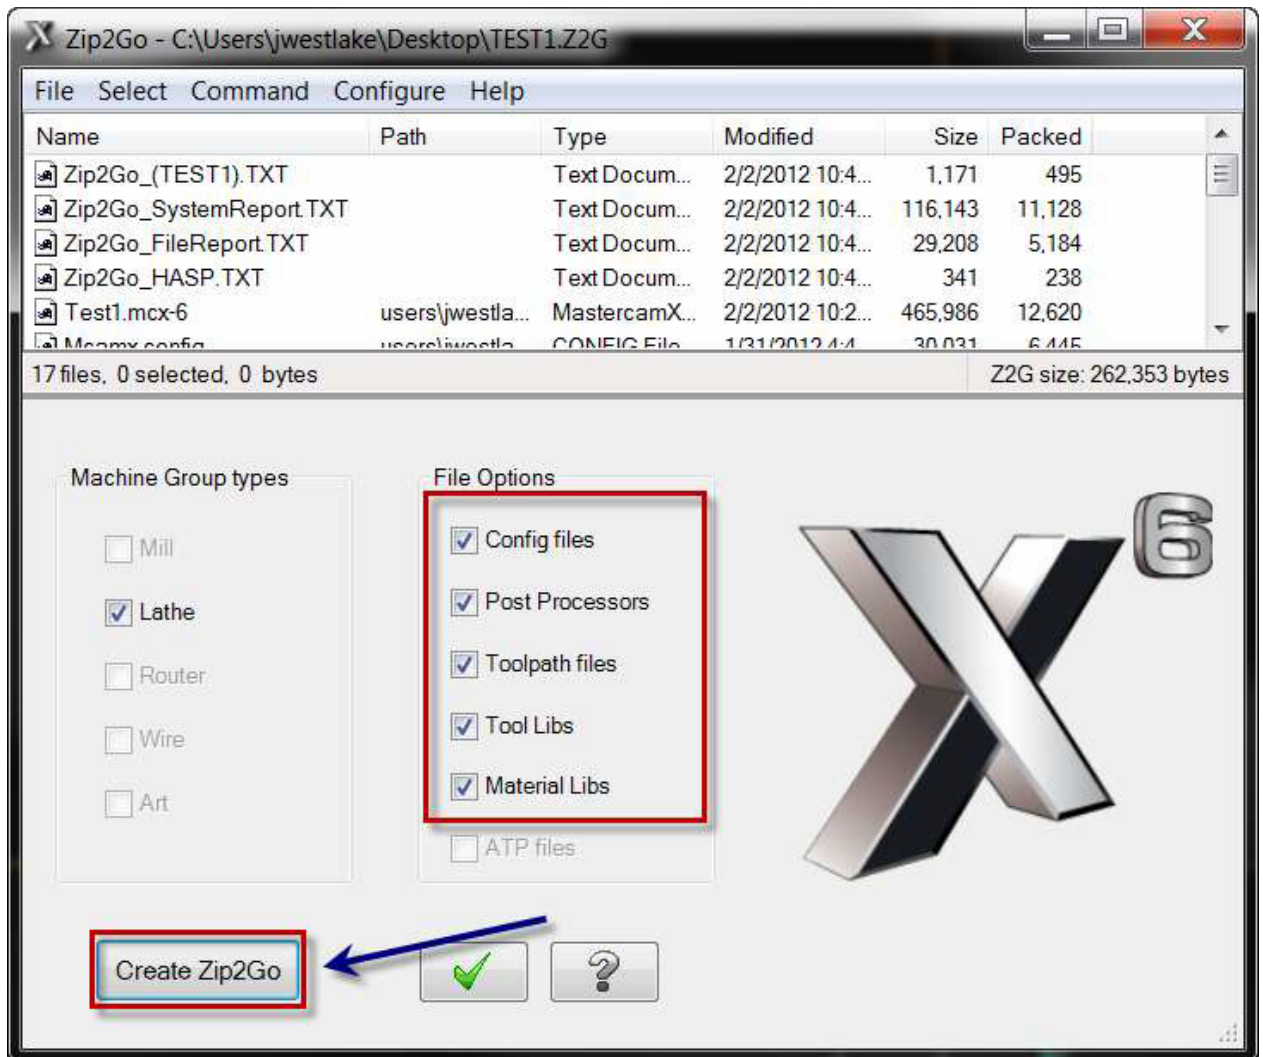

For Mastercam 2017, this has been moved to the FILE menu or you can use the Zip2Go icon found in the Quick Access Toolbar (see below).

3. Check the location that the Zip2gGo will be saved in by selecting 'Configure'.

4. Check all available file types and then select the 'Create Zip2Go' button.

5. When files are done populating in the top section you can select the green check. Zip2Go file should be in the location that you specified in step 3 and it will have a .Z2G extension.
